How does Enphase solar + storage work?

Since Enphase solar + storage is 40 A, it is directly connected to the main load center. For simple installations with no backup Enphase storage can save customers money by optimizing power consumption based on time of use tariffs. Here is an example of a main load center that allows up to 40 A of backfeed.

Can ESS be operated without PV?

ESS can also be operated without PV. This is typical for virtual power plants, where the installation is part of a cluster of small storage systems - supplying energy to the grid during peak demand. 2.
