### What happens if you don't have energy storage?

Without energy storage (i.e., how the electric grid has been for the past century), electricity must be produced and consumed exactly at the same time. When you turn on a hairdryer in your home, somewhere, an electricity generation plant is turning up just a tiny bit to keep the grid in balance.

### What is an energy storage system (ESS)?

Energy Storage System (ESS) As defined by 2020 NEC 706.2, an ESS is "one or more components assembled together capable of storing energy and providing electrical energy into the premises wiring system or an electric power production and distribution network." These systems can be mechanical or chemical in nature.

#### What is load shedding?

Load Shedding Load shedding describes the reduction in net electrical demand by removing loads connected to an ESS. This is a valuable technique for ensuring that power to essential loads is not lost when onsite stored energy is in limited supply and energy production cannot account for the shortage.

#### What are energy storage systems?

Energy storage systems allow electricity to be stored--and then discharged--at the most strategic times. Today,Lithium-ion batteries,the same batteries that are used in cell phones and electric vehicles, are the most commonly used type of energy storage.

### Why is energy storage important?

Energy storage can "firm up" renewable resources, maximizing their value to the grid. In addition, energy storage can reduce the cost of electricity (storing energy when it is cheapest, dispatching it when it is most expensive), and increase the reliability of our aging electric grid increasingly strained by climate change.

### What is a solar-plus-storage system?

A solar-plus-storage system is a battery system that is charged by a connected solar system, such as a photovoltaic (PV) one. In other words, solar-plus-storage combines a battery energy storage system with solar PV to reduce a customer's energy costs and carbon footprint at the same time. See it in action.
