Can energy storage save you money?

If you have a renewable electricity generator like solar panels or a wind turbine, installing energy storage will save you money on your electricity bills. You need to weigh the potential savings against the cost of installation and how long the battery will last.

How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and store it in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

How do energy storage systems work?

Energy storage systems let you capture heat or electricity when it's readily available. This kind of readily available energy is typically renewable energy. By storing it to use later, you make more use of renewable energy sources and are less reliant on fossil fuels. Let's look at how they work and what the different types of energy storage are.

Why is energy storage important?

Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy. It reduces wasted energy and is more cost effective than exporting excess electricity. For example, you can store electricity generated during the day by solar panels in an electric battery.

What is a residential energy storage system?

A residential energy storage system is a power system technology that enables households to store surplus energy produced from green energy sources like solar panels. This system beautifully bridges the gap between fluctuating energy demand and unreliable power supply, allowing the free flow of energy during the night or on cloudy days.

Can you use a battery to store electricity?

You can use a battery to store electricity you import from the grid at cheaper times of the day, with a smart time of use tariff. This can reduce your reliance on more expensive electricity during peak periods, with some tariffs even letting you sell energy during those periods.
