Are there any gaps in energy storage technologies?

Even though several reviews of energy storage technologies have been published, there are still some gaps that need to be filled, including: a) the development of energy storage in China; b) role of energy storage in different application scenarios of the power system; c) analysis and discussion on the business model of energy storage in China.

How to develop a safe energy storage system?

There are three key principles for developing an energy storage system: safety is a prerequisite; cost is a crucial factor and value realisation is the ultimate goal. A safe energy storage system is the first line of defence to promote the application of energy storage especially the electrochemical energy storage.
