

Why is the EU emptying its gas storage facilities?

The EU is emptying its gas storage facilities at the fastest pace since the energy crisis three years ago as colder weather raises demand and the continent grapples with a decline in seaborne imports.

What happened to Europe's energy sector?

Like last winter, Europe moved out of its second winter since Russia's invasion of Ukraine without energy shortages, blackouts, cold homes or supply cuts. Quite the opposite, Europe ended winter with a remarkable milestone for its energy sector: EU gas storages were almost 60% full, a record amount.

What was the state of EU gas storages at the end of winter?

Quite the opposite, Europe ended winter with a remarkable milestone for its energy sector: EU gas storages were almost 60% full, a record amount.

Is energy storage a good investment in Europe?

Compared to classic renewables, energy storage has really only become an investable asset in Europe over the last few years on the back of technology advances, market price signals, and government support mechanisms.

Is Europe losing the grip of Russia over its energy sector?

Europe has finally loosened the grip that Russia had over its energy sector. This is evident in the remarkable milestone achieved at the end of winter, with EU gas storages being almost 60% full, a record amount.

How much gas has dropped in the EU's storage sites?

The volume of gas in the EU's storage sites has dropped about 19% from the end of September to mid-December, according to Gas Infrastructure Europe © REUTERS Roulia Khalaf, Editor of the FT, selects her favourite stories in this weekly newsletter. Related: Europe Cracks Down On Diesel Vehicles As it stands, there is potential to achieve both goals of energy security and decarbonisation via either route, each with their strengths and weaknesses.

Many European energy-storage markets are growing strongly, with 2.8 GW (3.3 GWh) of utility-scale energy storage newly deployed in 2022, giving an estimated total of more than 9 GWh. Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026.

An appropriate deployment of energy storage technologies is of primary importance for the transition towards an energy system. For that reason, this database has been created as a complement for the Study on energy storage - contribution to the security of the electricity supply in Europe.. The database includes three different approaches:

EU cracks down on Temu and Shein: Compliance with DSA under scrutiny. About the Author ... The technical storage or access is strictly necessary for the legitimate purpose of enabling the use of a specific service explicitly ...
