What is a flywheel energy storage array?

A project that contains two combined thermal power units for 600 MW nominal power coupling flywheel energy storage array, a capacity of 22 MW/4.5 MWh, settled in China. This project is the flywheel energy storage array with the largest single energy storage and single power output worldwide.

What is a 20 megawatt flywheel energy storage system?

The 20-megawatt system marks a milestone in flywheel energy storage technology, as similar systems have only been applied in testing and small-scale applications. The system utilizes 200 carbon fiber flywheels levitated in a vacuum chamber. The flywheels absorb grid energy and can steadily discharge 1-megawatt of electricity for 15 minutes.

What is a flywheel power storage system?

The flywheel power storage system is capable of storing electricity in the form of kinetic energy by rotating a flywheel, and converting the rotating power again to electricity, if necessary. Since this rechargeable battery does not deteriorate over time, it can be used for many purposes.
