

Are flexible dielectric film capacitors suitable for energy storage?

Cite this: ACS Appl. Mater. Interfaces 2019, 11, 5, 5247-5255 As passive components in flexible electronics, the dielectric capacitors for energy storage are facing the challenges of flexibility and capability for integration and miniaturization. In this work, the all-inorganic flexible dielectric film capacitors have been obtained.

What are metallized film capacitors?

Metallized film capacitors towards capacitive energy storage at elevated temperatures and electric field extremes call for high-temperature polymer dielectrics with high glass transition temperature (T_g), large bandgap (E_g), and concurrently excellent self-healing ability.

Are ferrite-based film capacitors efficient?

Pan, H. et al. Giant energy density and high efficiency achieved in bismuth ferrite-based film capacitors via domain engineering. Nat. Commun. 9, 1813 (2018). Chen, X. et al. Giant energy storage density in lead-free dielectric thin films deposited on Si wafers with an artificial dead-layer. Nano Energy 78, 105390 (2020).

Are polymer dielectrics suitable for high-temperature film capacitors?

Film capacitors based on polymer dielectrics face substantial challenges in meeting the requirements of developing harsh environment ($\geq 150^\circ\text{C}$) applications. Polyimides have garnered attention as promising dielectric materials for high-temperature film capacitors due to their exceptional heat resistance.

What is the cyclability of film capacitors based on polymer dielectrics?

A record-high energy density of $\sim 4.9 \text{ J/cm}^3$ with $\eta > 95\%$ is obtained at 150°C . Stable cyclability over 100,000 cycles under 400 MV/m at 150°C is achieved. Film capacitors based on polymer dielectrics face substantial challenges in meeting the requirements of developing harsh environment ($\geq 150^\circ\text{C}$) applications.

Are all-inorganic flexible dielectric film capacitors effective?

In this work, the all-inorganic flexible dielectric film capacitors have been obtained. The flexible capacitors show a desirable recoverable energy density (W_{rec}) of 40.6 J/cm^3 and a good energy efficiency (η) of 68.9%.

The ferroelectric and energy storage properties of BZT film capacitors are shown in Fig. 3. The P-E hysteresis loops of the BZT films are slim, as seen in Fig. 3 a-c. Leakage ...

Film capacitors with high energy storage are becoming particularly important with the development of advanced electronic and electrical power systems. Polymer-based ...

First, improving the energy storage density of film capacitor materials is conducive to miniaturizing electric equipment in EVs. Furthermore, metallized BOPP capacitors experience a 30 % ...

Ferroelectrics exhibit great potential in energy fields due to intrinsic spontaneous polarization and excellent dielectric properties, which are the key functional materials used in ...

BiFeO₃-BaTiO₃ is a promising base for developing high energy density capacitors. However, no reports have been available on fabrication of binary or even ternary BiFeO₃-BaTiO₃ based solid solution films via a ...

Polymer-based film capacitors have attracted increasing attention due to the rapid development of new energy vehicles, high-voltage transmission, elec...

Dielectric film capacitors with high energy density (W_{rec}) and high efficiency (η) as well as good flexibility are highly desired in electrical power systems, which will be beneficial to ...

With the development of advanced electronic devices and electric power systems, polymer-based dielectric film capacitors with high energy storage capability have become particularly important. Compared with polymer ...

Electrostatic dielectric capacitors with ultrahigh power densities are sought after for advanced electronic and electrical systems owing to their ultrafast charge-discharge capability. However, low energy density resulting from low ...

In recent years, researchers have been striving to achieve ultra-high energy storage performance, such as large recoverable energy storage density (W_{re}), high energy ...

Dielectric materials find wide usages in microelectronics, power electronics, power grids, medical devices, and the military. Due to the vast demand, the development of ...

Recently, lead-free relaxor ferroelectric (RFE) films have been considered to be the best potential stocks for high-temperature dielectrics capacitors among dielectric...

Dielectric capacitors which store energy in the form of an electrostatic field give an ultrafast discharge speed. Capacitors with high energy density and storage efficiency are ...

As passive components in flexible electronics, the dielectric capacitors for energy storage are facing the challenges of flexibility and ...

Large energy storage density and high thermal stability in a highly textured (111)-oriented Pb_{0.8}Ba_{0.2}ZrO₃ relaxor thin film with the coexistence of antiferroelectric and ferroelectric phases

High-energy-density metallized film capacitors select state-of-the-art benchmark biaxially oriented polypropylene (BOPP) as dielectric layers due to its intrinsic advantages ...

Dielectric electrostatic capacitors 1, because of their ultrafast charge-discharge, are desirable for high-power energy storage applications. Along with ultrafast operation, on-chip ...

The energy storage density of the metadielectric film capacitors can achieve to 85 joules per cubic centimeter with energy efficiency exceeding 81% in the temperature range ...

The PI/HAP composite film demonstrates high energy storage density under low E, offering an innovative solution for energy storage applications in film capacitors operating in ...

Antiferroelectric (Pb 0.87 Sr 0.05 Ba 0.05 La 0.02)(Zr 0.52 Sn 0.40 Ti 0.08)O₃ thin film capacitors were fabricated for dielectric energy storage. Thin films with excellent crystal quality (FWHM 0.021°) were prepared on (100) ...

At $x = 0.32$, the film demonstrates exceptional energy storage properties at ambient temperature, boasting an energy storage density of 103 J cm⁻³ and energy storage efficiency ...

Moreover, the 3D capacitor exhibits excellent temperature stability (up to 150 °C) and charge-discharge endurance (10⁷ cycles). The results indicate that the 3D HfO₂ thin film ...

At present, the compatibility of energy and the environment has become the focus of global attention, and the development of available green energy has been put on the ...

The BMT-0.3STO film capacitor can exhibit excellent W_{rec} and i simultaneously, which is not common in other dielectric material systems. To better illustrate the superior ...

Film capacitors based on polymer dielectrics face substantial challenges in meeting the requirements of developing harsh environment (≥ 150 °C) applications. ... Status quo and ...

In this paper, we report our recent development of PLZT film capacitors for power electronics and high-field energy storage. PtSi substrates were cut from premium-grade < 100 ...

The high energy storage performance of a dielectric capacitor strongly depends on factors such as remnant polarization (P_r), maximum polarization (P_{max}), and applied electric ...

Film capacitors are easier to integrate into circuits due to their smaller size and higher energy storage density compared to other dielectric capacitor devices. Recently, film capacitors have achieved excellent energy storage performance ...

Some renewable energy, such as wind power, solar power and tidal power, have become effective alternatives to the continuous consumption of fossil fuels, promoting the ...

Advances in flexible electronics are driving dielectric capacitors with high energy storage density toward flexibility and miniaturization. In the present work, an all-inorganic thin ...

Film capacitors have become the key devices for renewable energy integration into energy systems due to its superior power density, low density and great reliability [1], [2], ...
