Li-ion and lead-acid batteries are the most commonly used energy storage systems here. However, advantages of flywheel energy storage systems such as higher efficiency and longer life are projected to increase the demand for flywheel energy storage systems, within the country.

What is a flywheel energy storage system (FESS)?

With the second plant, the company expects to export its flywheels to other countries that need energy storage systems. Up to 70-80% of the existing plant's output is for the local market, adding that a flywheel weighs about 2.5 tons. Flywheel Energy Storage System (FESS) is a leading technology for storing energy.

Which countries use flywheel energy storage?

Some of the major automobile manufacturers such as Volkswagen, Mercedes Benz, and Porsche are headquartered in this country. Thus, the growing automobile industry is one of the biggest drivers of the flywheel energy storage market in Germany. The UK is committed in making use of renewable sources for energy storage.

What are flywheels used for?

Flywheels are used as intermediate energy storage systems for transport applications such as automobiles. Flywheel storage energy systems are more commonly used in Formula 1 cars and hybrid vehicles. However, manufacturers such as Maruti Suzuki have adopted this technology for passenger vehicles also.

What is a flywheel UPS system?

Flywheel UPS systems can be used to overcome the problems faced by sudden dips or glitches in electric and voltage supplies. Also, since this technology does not involve the use of fossil fuels, it is environmentally friendly. Flywheels are used as intermediate energy storage systems for transport applications such as automobiles.
