

How much energy can a battery store?

For most battery systems, there's a limit to how much energy you can store. To store more, you need additional batteries. Even if you don't pull electricity from your battery, it will slowly lose its charge over time.

What does a home battery do?

Batteries only store energy--they don't produce it. To truly increase your grid independence and your electric bill savings, you'll want to pair your battery system with a solar power system. You don't need solar to install a home battery, but remember that batteries only store energy--they don't produce it.

Do I need solar to install a home battery?

You don't need solar to install a home battery, but remember that batteries only store energy--they don't produce it. To increase your grid independence and electric bill savings, you'll want to pair your battery system with a solar power system.

What's the best way to use home batteries?

You'll get the most out of your home batteries when you pair them with a home solar panel system. This is especially true if your utility doesn't pay you a lot for the excess electricity your solar panels generate and send to the grid. You don't need a home solar panel system to reap the benefits of batteries.

Can solar power be stored in a battery?

Yes, solar power can be stored in a battery. Existing solar systems typically have solar inverters which change the DC power produced by panels to AC power. However, to store that AC power in a battery, it needs to be inverted again to DC power.

Is the Storage Power System a good battery choice?
