How can a home storage battery help you save money?

Alternatively, you could install a home storage battery. These store your electricity to use later, making your energy system more independent from the National Grid. Usually battery storage is used alongside solar panels, but it can also be used with an energy tariff that offers cheaper electricity at off-peak times.

How much energy can a battery store?

For most battery systems, there's a limit to how much energy you can store. To store more, you need additional batteries. Even if you don't pull electricity from your battery, it will slowly lose its charge over time.

Why should you get a battery for your home?

A home backup battery allows you to use your stored energy to avoid pulling electricity from the grid when it costs the most. This can help you save money on your electricity bills and reduce your reliance on the grid. Additionally, demand charges are becoming more common for homeowners.

How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and store it in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.
