What is a battery energy storage system?

A battery energy storage system, often referred to as a 'battery storage system', is a system that stores electrical energy in batteries.

How do I install a battery storage system?

First, when having a battery storage system installed, ask to see the installer's Clean Energy Council Accredited Installer card. This shows that the installer is qualified. Then, follow the specific installation instructions for your chosen system.

How long does it take to install a battery storage system?

The installation process for a battery storage system is usually very straightforward and only takes around 1-2 days (unless you are having a large system installed).

What does a battery storage system installer do?

Your battery storage system installer will set up your system and show you how it all works, including different operating modes, and provide important safety information for end users.

How do I install a battery module?

Place the frame on top of the top battery module in the tower and secure it with the 3 screws provided in the kit. Install the battery when there is enough PV to charge the battery pack after adding the module. Make sure to turn off the CB and the power button (soft switch) on every battery module, see Connecting a Single Battery Module .

How do I stack a battery module?

Stack the entire system. The modules are heavy and require at least two people to lift. Stack the battery modules one by one. The guide pins will make sure that the connectors mate properly. 2. Turn on the power switch on each module, beginning with the one on the bottom. (5) Turn on the power switch on the controller module.
