Gravitricity, founded in 2011 by Peter Fraenkel, built a 15-meter 250-kilowatt gravity battery prototype near Edinburgh, Scotland that started trial operations and grid-connection in April 2021. Gravity batteries can have different designs and structures, but all gravity batteries use the same properties of physics to generate energy.

How do gravity batteries store energy?

Gravity batteries store energy using gravity. They're often used to store energy from renewable sources like solar and wind. For example, a gravity battery might use solar power to pump water uphill on a sunny day and then, on a cloudy day, let the water flow downhill (using gravity) and generate power from it hydroelectrically.
