What is the C rate of a lithium battery?

So different material battery will have different rate, the typical NCM lithium battery C rating is 1C, and maximum C rate can reach 10C about 18650 battery. the typical LiFePO₄ lithium battery C rating is 1C, and the maximum C rate can reach 3C about LiFePO₄ prismatic battery.

How do you calculate C rating of a lithium battery?

The C-rate of a lithium battery shows how quickly it can charge or discharge compared to its capacity. To calculate it, divide the charge/discharge current by the battery's capacity. For instance, a 2000mAh lithium battery discharging at 1A is 1C. Factors like battery chemistry and size affect C ratings.

What is a C rating in a lithium ion battery?

The C-rate is a unit used to identify a current value/discharge time of a lithium-ion battery under different conditions. Since you have had a clear view of what the C rating is, and what it stands for in a battery, you will need to include it in your next selection for batteries to get the best out of what you settle for.

What is the C-rate of a lithium battery?

When dealing with lithium batteries, the C-rate is a crucial factor that dictates how fast a battery charges or discharges relative to its capacity. If a battery with 1000mAh capacity takes one hour to charge or discharge completely, its C-rate is 1C; if it takes two hours, it's 0.5C.

What is the C-rate of a rechargeable battery?

C-rate is an important information or data for any battery, if a rechargeable battery can be discharged at that C rating, a 100Ah battery will provide about 100A, then the battery has a discharge rate of 1C. If the battery can only provide a maximum discharge current of about 50A, then the discharge rate of the battery is $50A/100Ah=0.5C$.

What does a C rating mean on a battery?

It controls the charge and discharge rates of a battery, determining the current at which the battery is charged or discharged and the speed of this process. The capacity of a battery is typically rated and labeled with a C rating. For example, a 3C rating for a fully charged 100Ah battery means it can provide 300 amps for one-third of an hour.
