Process time refers to the length of time spent in working on the products or orders.. Inspection time is spent on making sure that the products are not defective.. Move time is time spent in transferring products between workstations.. Queue time is the total time spent by the products while standing-by to be processed, moved, inspected, or shipped.. Among these, the ...

Efficiency, energy ratio (ER) and energy payback. There are several expressions used to evaluate the energy performance of an ESS, of which standard terms include cycle efficiency, round-trip efficiency, energy ratio (ER) and energy payback period. Cycle efficiency takes into account the ratio between the energy output and
