## How to charge underwater energy storage batteries

How is the battery power system connected to the underwater vehicle?

The battery power system is connected via the subsea connectorsup to the programmable electronic load where the battery system would be discharged in accordance to a simulated load cycle of the underwater vehicle for realistic operational conditions. The experiment test plan for the battery power system can be tabulated in Table 5.

Can batteries be used in underwater vehicles?

For requirements related to the use of batteries in underwater vehicles, please refer to Subsection 10/11 of the ABS Rules for Building and Classing Underwater Vehicles, Systems and Hyperbaric Facilities. Battery technology is a field that is continuously evolving with respect to battery chemistries and designs.

What is the best battery system for a shallow diving underwater vehicle?

For shallow diving underwater vehicles (UWV's), the net mean density of the pressure vessel is low and the simplest and probably the most efficient battery solution is to use a battery system with a high energy density and put the battery and electronic systems together inside the pressure vessel.

Is there a need for energy for underwater charging?

The evolving need for energy for underwater charging is worldwide, in all bodies of water. Differing energy demands could make the energy in ocean currents, tidal currents, and waves both near to shore and in the open oceans relevant, providing no geographic constraints.

Could a new lithium-ion battery system be a breakthrough in submarine technology?

For years, researchers and developers have been working on a new battery system for submarines. With a revolutionary result: The new lithium-ion battery system can take technology under water to a new level. The new lithium-ion battery system for submarines could be a milestone in the industry.

How much power does an underwater recharge station produce?

Small stand-alone underwater recharge stations using undersea currents can produce power of approximately 1,500 watts for local AUV recharging (Ryan Frommelt, personal communication, October 2018).
