Superconducting magnetic energy storage systems(SMESS) store electricity in the magnetic field through a large current circulating in a superconducting coil. Current studies focus on reducing the cost of coils and temperature control system.

What is a pumped storage hydroelectric power plant?

A pumped storage hydroelectric power plant stores electricity by pumping water during off-peak times. In such a plant,the stored water can be utilized to generate electricity. The hydroelectric power plant can store electricity in Megawatts (MW) or even Gigawatts (GW). The potential and kinetic energy of the stored water is then converted into electric energy.
