

Invention of energy storage air power generation equipment

When was compressed air energy storage invented?

By then the patent application "Means for Storing Fluids for Power Generation" was submitted by F.W. Gay to the US Patent Office . However, until the late 1960s the development of compressed air energy storage (CAES) was pursued neither in science nor in industry.

Can compressed air energy storage detach power generation from consumption?

To address the challenge, one of the options is to detach the power generation from consumption via energy storage. The intention of this paper is to give an overview of the current technology developments in compressed air energy storage (CAES) and the future direction of the technology development in this area.

Who contributed to the study of compressed air energy storage?

All authors contributed to this work in collaboration. Jidai Wang, Kunpeng Lu and Jihong Wang conducted a wide search of literature in compressed air energy storage and performed their analysis.

What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the most promising mature electrical energy storage technologies. CAES in combination with renewable energy generators connected to the main grid or installed at isolated loads (remote areas for example) are a viable alternative to others energy storage technologies.

Who invented the energy storage system?

The first energy storage system was invented in 1859 by the French physicist Gaston Planté. He invented the lead-acid battery, based on galvanic cells made of a lead electrode, an electrode made of lead dioxide (PbO_2) and an approx. ... 37% aqueous solution of sulfuric acid acting as an electrolyte.

How can large-scale power storage be realized?

In addition to PHS, compressed air energy storage (CAES) is another feasible way to realize large-scale power storage. Since 1949 when Stal Laval proposed to store compressed air using underground caverns, the research in CAES has been progressing.
