Can lithium lanthanum zirconium oxide (LLZO) be used as a battery?

The research reveals that an all-solid-state lithium metal battery (ASSLMB) using lithium lanthanum zirconium oxide (LLZO) would achieve a gravimetric energy density of only 272 Wh/kg, a marginal increase over the 250-270 Wh/kg offered by current lithium-ion batteries.

Why is lead zirconium titanate banned?

Though Lead zirconium titanate (PZT) and other lead based piezoelectrics are commercially accepted, EU and other Western nations have banned the usage of lead in many commodities due to its toxicity. Due to this resolution, biocompatible and ecologically friendly lead-free piezoelectric materials are in demand due to lead toxicity.
