How can a gravity hydraulic energy storage system be improved?

For a gravity hydraulic energy storage system, the energy storage density is low and can be improved using CAES technology. As shown in Fig. 25, Berrada et al. introduced CAES equipment into a gravity hydraulic energy storage system and proposed a GCAHPTS system.

Carnot Battery, which is previously known as Pumped Thermal Energy Storage (PTES) [10], is a promising energy storage technology to cope with the problems mentioned above. A long cycle life, less geographical constraints and relatively low economic cost make it a competitive option in future electricity systems [11]. Carnot Battery system typically consists of ...
