What is the business model of energy storage in Germany?

The business model in the United States is developing rapidly in a mature electricity market environment. In Germany, the development of distributed energy storage is very rapid. About 52,000 residential energy storage systems in Germany serve photovoltaic power generation installations. The scale of energy storage capacity exceeds 300MWh.

What are the emerging energy storage business models?

The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage. The energy storage has truly been upgraded from an auxiliary industry to the main industry.

When will energy storage be commercialized?

From 2016 to 2020, the goal is to build energy storage demonstration projects with commercial purposes. This marks the development of energy storage into the early stages of commercialization. During this period, the management system, incentive policies and business models of energy storage were mainly explored.

What is the optimal planning model for regional integrated energy system?

In Ref. [ 8 ], an optimal planning model for regional integrated energy system of power and natural gas based on the coupling of CCHP system is proposed, which solves the problem of location and capacity optimization of CCHP.

What business models are used in energy storage technology?

According to this review, the two-part tariff model, the negotiated lease model and the energy performance contracting model are traditional business models that have been practiced for a long time. The application of these business models to energy storage technology has achieved good results.

Does independent energy storage have a preferential power generation incentive system?

In addition, independent energy storage also has a preferential power generation incentive system. In December 2021, the Haiyang 101 MW/202MWh energy storage power station project put into operation, and energy storage participated in the market model of peak regulation application ancillary services.
