## **SOLAR** PRO. Light energy and energy storage device experiment

What is the focus of the energy storage lab?

The energy storage lab's focus is: to bring together scientists and engineers, as well as suppliers and manufacturers, in the industrial and academic community to ease a bottleneck in battery development near the nation's automotive capital.

Do light-assisted energy storage devices have a bottleneck?

After the detailed demonstration of some photo-assisted energy storage devices examples, the bottleneck of such light-assisted energy storage devices is discussed and the prospects of the light-assisted rechargeable devices are further outlined. The authors declare no conflict of interest.

What are light-assisted energy storage devices?

Light-assisted energy storage devices thus provide a potential way to utilize sunlight at a large scale that is both affordable and limitless.

How does a photorechargeable lithium battery work?

Here, we report a photorechargeable lithium battery employing nature-derived organic molecules as a photoactive and lithium storage electrode material. By absorbing sunlightof a desired frequency, lithiated tetrakislaws one electrodes generate electron-hole pairs.

Can lithium batteries be charged on exposure to sunlight?

Lithium batteries that could be charged on exposure to sunlightwill bring exciting new energy storage technologies. Here, we report a photorechargeable lithium battery employing nature-derived organic molecules as a photoactive and lithium storage electrode material.

Is a quinone-based organic electrode a photoactive or lithium storage material?

During electrochemical operation, the observed rise in charging current, specific capacity, and Coulombic efficiency under light irradiation in contrast to the absence of light indicates that the quinone-based organic electrode is acting as both photoactive and lithium storage material.

Electrochemical energy storage, known for adaptability and high energy density, efficiency, and flexible sizing, offers advantages over other methods 6, 7, 8, 9.
