Several studies have investigated the storage tank fire accidents [7-18] and the thermal response of heated storage tanks [4,19-23]. Some numerical studies, using finite element code of Abaqus [4,19,20,22] or Ansys [21], have particularly addressed the buckling of storage tanks when exposed to the adjacent fire radiation.

Wang et al. [83] proposed a hybrid system utilizing a microencapsulated PCM-slurry storage tank, for cold storage, in combination with a cooled ceiling and an evaporative cooling system. Results show that the lowest and highest cooling energy storages respectively for Hong Kong (10%) and Urumqi (80%).
