How does frequency regulation affect energy storage?

When the energy storage system must be charged under the condition of frequency regulation, the charge power absorbed by the energy storage system steadily decreases when the SOC is at a high boundary value, and it eventually cannot absorb the charge power when the SOC hits the critical value.

What is dynamic available AGC for battery energy storage system (BESS)?

Reference based on the new concept of dynamic available AGC for battery energy storage system (BESS), an independent AGC control strategy based on area control error signal distribution is proposed, to further enhance the impact of BESS rapid response ability.

Is energy storage a new regulatory resource?

As a new type of flexible regulatory resource with a bidirectional regulation function [3,4], energy storage (ES) has attracted more attention in participation in automatic generation control (AGC). It also has become essential to the future frequency regulation auxiliary service market.

Can flexible load and energy storage be used to regulate frequency?

The method of using flexible load on the load side and energy storage on the power side to regulate frequency is proposed. The depth limit of energy storage action is proposed, which clarifies the dead zone and the maximum output limit.

What is the difference between auxiliary regulation and energy storage system?

The output fluctuation of the thermal power unit is the biggest when the auxiliary regulation is only from the load side, and is relatively small when the frequency change rate is fast. The output of the energy storage system is small while the SOC consumption is small, and the frequency stability is not affected.

What is the operation status of energy storage system (SoC)?

Among them, the operation status of SOC can be divided into the root mean square value  $SOC_{rms}$  of SOC and the operation range  $SOC_{min} - SOC_{max}$  of SOC, and the benchmark value of SOC is 0.5. The greater the contribution of energy storage system, the greater the role of energy storage system in auxiliary power grid frequency modulation.
