

What are the rechargeable batteries being researched?

Recent research on energy storage technologies focuses on nickel-metal hydride (NiMH), lithium-ion, lithium polymer, and various other types of rechargeable batteries. Numerous technologies are being explored to meet the demands of modern electronic devices for dependable energy storage systems with high energy and power densities.

What is a SMES battery?

SMES (Superconducting Magnetic Energy Storage) offer a quick response for charge or discharge, similar to how an energy battery operates. Unlike a battery, the energy available in a SMES system is unaffected by the rate of discharge. Large forces are applied to the conductor due to the magnetic field's interaction with the circulating current.
