Is a heat exchanger module cost-effective?

Heat exchanger module (HEM). In terms of cost-effectiveness, there are no common available data that estimate the cost of it but it is more cost-effective compared to heat exchangers. From a performance efficiency perspective, it has a storage density of 74%. However, heat transfer enhancement methods are being researched.

The energy stored in the two I-shaped heat exchangers and the honeycomb heat exchanger is almost the same, with a difference of 9.3 kJ between them. On the other hand, the other heat exchangers show a greater difference, 109.29 kJ compared with the exchanger with longitudinal fins and 134.66 kJ compared with the exchanger with circular fins.
