

Does the DoD need a microgrid energy storage system?

Jack Ryan, Program Manager for DIU. At present, the DoD is heavily dependent on mobile generators in a microgrid configuration for its tactical power systems, but has been lacking a systems-integrated energy storage solution that can enhance grid resilience, fuel efficiency, and optimize tactical generator performance.

Why does DoD need a microgrid system?

DOD needs to advance microgrid systems for several reasons. First, DOD has energy assurance and resilience needs that significantly exceed most civilian requirements, and it therefore requires a separate system for energy production and storage.

Should a microgrid system have backup power?

While SMRs are ideal for providing continuous energy, a microgrid system should have backup power available in case the unit does need to go offline for any period. As stated, batteries have limited ability to provide anything beyond intra-day energy storage, which itself is a system vulnerability.
