

A new energy storage system known as Gravity Energy Storage (GES) has recently been the subject of a number of investigations. It's an attractive energy storage device that might become a viable alternative to PHES in the future [25]. Most of the literature about gravity energy storage emphasizes on its technological capabilities.

Most TEA starts by developing a cost model. In general, the life cycle cost (LCC) of an energy storage system includes the total capital cost (TCC), the replacement cost, the fixed and variable O& M costs, as well as the end-of-life cost [5]. To structure the total capital cost (TCC), most models decompose ESSs into three main components, namely, power ...
