

National development of high-voltage mobile energy storage system

Why is energy storage technology needed in China?

In China, RES are experiencing rapid development. However, because of the randomness of RES and the volatility of power output, energy storage technology is needed to chip peak off and fill valley up, promoting RES utilization and economic performance.

Will China achieve full market-oriented development of new energy storage by 2030?

The country has vowed to realize the full market-oriented development of new energy storage by 2030, as part of efforts to boost renewable power consumption while ensuring stable operation of the electric grid system, a statement released by the National Development and Reform Commission and the National Energy Administration said.

How can China improve the construction of energy storage technology standard system?

In the future, China should strengthen the construction of energy storage technology standard system from three aspects. First of all, quicken the pace of establishing basic standards and revising the existing standards. Technology standards, design specifications and other requirements are of the basic standards of energy storage technologies.

Is energy storage a precondition for large-scale integration and consumption?

So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry.

When will new energy storage development be introduced?

The commission said earlier it will introduce a plan for new energy storage development for 2021-25 and beyond, while local energy authorities should also make plans for the scale and project layout of new energy storage systems in their regions.

What are the core technologies for energy storage?

At this stage, core technologies should be broken through including the screening of high temperature heat storage materials and its device design, the design and manufacture of the core component of CAES, the new material manufacture of chemical energy storage, the energy storage systems integration and energy management.
