

Ni-cd battery energy storage container in developed countries

Can battery storage transform the power system in developing countries?

There has been significant excitement around deployment of grid-connected battery storage around the world including many developing countries. As the cost of battery storage followed the sharp drop in solar and wind, batteries hold immense possibility to transform the power systems in the developing world.

Why are Ni Cd batteries so popular?

They were routinely used in power tools, because they can supply surge currents due to their low internal resistance. Being robust over decades also makes the Ni- Cd battery a good choice for aircraft, electric cars, and boats.

Where are Intersium® battery containers made?

Our range of Intersium® battery containers are fully developed and qualified by in-house engineering teams and are manufactured and assembled in Saft factories. Since the first Intersium Max left our factory in 2012, we have increased by 10 the energy density of our lithium-ion 20-foot containers, from 0.5 MWh to 5.1 MWh.

Are Ni-Cd batteries still relevant?

While not excelling in typical measures such as energy density or first cost, Ni-Cd batteries remain relevant by providing simple implementation without complex management systems, while providing long life and reliable service. Early Ni-Cd cells used pocket-plate technology, a design that is still in production today.

What is the business case for batteries in developing countries?

There is a critical need to systematically analyze the business case for batteries in developing countries. The IFC White Paper provides an excellent foundation for the methodology that needs to be implemented for power systems where there are potentially strong cases, marked by high penetration of renewables and inflexible systems.

How are Ni-Cd batteries recycled?

Recycling Ni-Cd batteries is a complex process that involves separating the nickel, cobalt and cadmium from the electrodes, a process perfected by Saft's plant in Oskarshamn, Sweden - the only one worldwide involved in both the recycling and manufacturing of Ni-Cd batteries and incorporating recycled metals.
