

Why should you choose PCI?

PCI is a trusted partner to energy companies around the world with a thirty-year track record of rapidly adapting to the ever-changing energy landscape and policies. Our customers enjoy very significant benefits from optimizing their portfolios, on average saving somewhere between one and three percent of the production costs.

What are energy storage systems?

To meet these gaps and maintain a balance between electricity production and demand, energy storage systems (ESSs) are considered to be the most practical and efficient solutions. ESSs are designed to convert and store electrical energy from various sales and recovery needs[,,].

What does PCI stand for?

These technologies, funded by DOE, Air Force, NASA and others, provide high value in a compact and durable package. Precision Combustion, Inc. (PCI) is developing air cleaning applications focused on control of Volatile Organic Compounds (VOCs), CO₂, Sulfur and other air pollutants.

How do energy storage technologies affect the development of energy systems?

They also intend to effect the potential advancements in storage of energy by advancing energy sources. Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage technologies.

What is PCI gentrader®?

PCI's Gentrader®; seamlessly incorporates batteries and other energy storage assets into near real-time decision support, forecasting, long-range planning, and analytics. Automate and optimize your battery assets while boosting profits effortlessly with PCI BatteryTrader(TM), a module of PCI's industry-leading GenTrader® product.

Are electrochemical battery storage systems sustainable?

Electrochemical battery storage systems possess the third highest installed capacity of 2.03 GW, indicating their significant potential to contribute to the implementation of sustainable energy.

North Haven, CT (September 28th, 2023) - Precision Combustion, Inc. (PCI) announced today that it has won a Small Business Innovation Research (SBIR) Phase I award from the Navy to ...

As President and COO of PCI, I had the privilege of representing our team at this year's Energy Trading Week Americas. Participating in a panel with other industry influential ...

Though energy storage technologies have been in use for nearly a century, the viability of battery storage as a tool to deliver grid resilience is now being driven by the steep ...

How a PCI Customer Experienced Our Values. John Bonin, former VP of Energy Supply and Market Operations, experienced how PCI actively lives our value of customer success when his company, CPS Energy, ...

Automate and optimize your battery energy storage systems (BESS) while boosting profits effortlessly with PCI BatteryTrader(TM), a module of PCI's industry-leading GenTrader™ product.

In all three markets--SPP, PJM, and MISO--capacity resources include generation units, demand response programs, and, increasingly, energy storage systems. ...

At its core, RTCB integrates real-time co-optimization of energy and ancillary services with the inclusion of battery energy storage systems. This means ERCOT can simultaneously optimize energy dispatch and ancillary ...

As the energy landscape continues to evolve, MISO's accreditation methodologies will likely see further updates. The growing integration of renewables and storage, coupled with advancements in demand ...

This time of year at PCI is the calm before the storm. The holidays are behind us, the year ahead of us, and the first mountain to climb is just barely visible on the horizon: ...

Learn more about distributed energy resources in our blog post, "The DER Conundrum: Navigating the Complexities of Distributed Energy Resources." For example, utilities and grid operators are increasingly creating ...

The power grid is undergoing a dramatic transformation, driven by the increasing integration of renewable energy sources, energy storage technologies, and distributed energy ...

By upgrading technology and improving efficiency, repowered assets can deliver more value to market participants and support the transition to a cleaner, more sustainable ...

The expansion of utility-scale battery storage in the U.S. is making headlines. Since 2021, battery storage U.S. capacity has seen a steady increase in its battery storage capacity, and if the current pace continues, the Energy ...

Precision Combustion, Inc. (PCI) is a clean energy technology company developing and manufacturing advanced catalytic and sorption devices and systems for energy

Maximize the return on your energy storage investment Automatically co-optimize energy storage assets including batteries (BESS) within a broader portfolio and leverage effective bidding strategies within ISO and ...

Throughout this concise review, we examine energy storage technologies role in driving innovation in mechanical, electrical, chemical, and thermal systems with a focus on ...

To provide the best experiences, we use technologies like cookies to store and/or access device information. Consenting to these technologies will allow us to process data ...

Incorporate storage or load balancing: Co-locating energy storage or balancing generation with local load can help achieve a net zero impact on the grid, reducing the need ...

Pumped storage hydropower (PSH) is a critical technology for managing the variability of renewable energy sources such as wind and solar. As the most established form of large-scale energy storage, PSH plays a pivotal ...

New entrants, such as renewable energy projects or energy storage systems, can compete alongside traditional generation resources without being priced out of the market. The result is a diverse and competitive ...

At PCI Energy Solutions, we recognize energy storage as a linchpin in the shift toward sustainable energy. As renewable sources like wind and solar take center stage, energy storage solutions, especially batteries, ...

The comprehensive report, " Energy Storage Options for North Carolina," focuses on the net benefits associated with different storage technologies in addition to: Providing an ...

In a recent webinar, PCI partnered with Sandia National Laboratories and the LDES National Consortium to explore how ISO/RTO markets are evolving to accommodate LDES ...

To speed up the commercialization of storage technology, \$500M is earmarked for energy storage demonstration projects. An additional \$14B is slated for resiliency programs, ...

PCI's concept pairs high energy density carbon-free fuels and an electrochemical microchip with a small battery buffer, power/control electronics, and balance of plant ...

North Haven, CT (September 28th, 2023) - Precision Combustion, Inc. (PCI) announced today that it has won a Small Business Innovation Research (SBIR) Phase I award from the Navy to develop and integrate ...

Join us for "Long Duration Energy Storage in RTO Markets," a webinar hosted by the LDES National Consortium exploring how RTOs are adapting to support long-duration ...

The concept of storing cheap, off-peak electricity to serve on-peak demand isn't new. Technologies like compressed air and pumped storage hydro have been around for decades, providing operational flexibility as well as ...

As the energy landscape changes with the increased deployment of batteries, we gain valuable insights into the intricate dynamics of coupled energy systems. In response, GenTrader adapts ...

The energy industry is undergoing a massive transition. Renewables, distributed energy resources, electrification, and new technologies are disrupting traditional utility business models. IT organizations play a ...

Unlike conventional approaches that require extensive energy-intensive compression or liquification, PCI's technology offers a more energy-efficient storage solution. ...

Using salt caverns for energy storage supports the increased build-out of renewable energy and a fixed price for hydrogen production and storage. Another significant use case for salt cavern storage is being ...
