What is a chemical energy storage system?

In electrochemical-energy storage systems such as batteries or accumulators, the energy is stored in chemical form in the electrode materials, or in the charge carriers in the case of redox flow batteries. As a result, they are a subgroup of chemical-energy storage systems.

Energy storage is useful when energy is harvested at a different time from when it's used. For example, electricity must be used very quickly after it's been made (within milliseconds).
