

Can a port energy system be integrated?

A framework for an integrated port energy system is proposed. An energy hub model considering demand response and energy interconnection is built. The advantages of the proposed methods for the port energy system are proved. The impact of the ships using shore-side power on the planning cost is analyzed.

What energy storage technologies can a seaport use?

Thanks to the rich energy sources, ports, especially large seaport integrated energy systems, can apply various energy storage technologies such as electric energy storage, thermal energy storage, natural gas storage, and hydrogen storage.

Can a green port integrated energy system improve energy management?

The green port integrated energy system contains abundant flexible resources and multiple forms of energy, with great potential for energy optimization management. This section summarizes existing research results on energy management models from two aspects: considering heterogeneous energy characteristics and under uncertainty conditions.

Why is energy storage a critical port function?

Ensuring availability of these electrical resources to meet loads which are intermittent and uncertain is becoming a critical port function. It requires investment in multi-vector energy supply chains, energy storage in ports and their associated energy management systems.

Is port integrated energy system a research hotspot?

The low-carbon technology of port integrated energy system is a research hotspot. This chapter analyzes the current status of port low-carbon operation, including port electricity replacement, renewable energy generation technology, clean fuel application in port and port low-carbon platform development.

What are the main research findings based on a port energy system?

The main research findings can be summarized as follows. Simulation results illustrate that the proposed IPES (case B) shows better economic and synergetic performances than the traditional port energy system (case A), with the total planning cost dropped by nearly 26%.
