What is standby power?

Standby power refers to the energy consumed by devices that are not actively in use but still draw power. This often happens when devices are in standby mode, where they remain active in the background. Think of power strips, boilers, kitchen appliances, or washing machines. Even when you think a device is turned off, it can still use energy.

How much does standby power cost?

In an average household, standby power can account for 5% to 10% of total energy consumption. This is approximately 400 to 800 kWh per year, depending on how many devices are in standby mode. Assuming the average energy price is EUR0.30 per kWh, standby power typically costs between EUR120 and EUR240 per year.

How much power does a household use a year?

The amount of standby power considered “normal” can vary depending on your household and the devices you use. In an average household, standby power can account for 5% to 10% of total energy consumption. This is approximately 400 to 800 kWh per year, depending on how many devices are in standby mode.

How many EPs do portable electronics users use a day?

Portable electronics users probably use two to three EPSs every day. To help conserve energy and reduce waste, these agencies created initiatives and legislation to compel power-supply designers to develop offline power supplies with higher efficiency and lower standby power.

What is the average efficiency of a power supply?

The average efficiency is based on the average of the efficiencies of the power supply taken at 25, 50, 75 and 100% loads. As I mentioned earlier, the DoE average efficiency standard (Table 4) is not as stringent as the CoC standard, and does not include a 10% load efficiency requirement.

Why do energy agencies need external power supplies?

Energy agencies around the world are concerned about growing power consumption and the amount of available deliverable energy. One of the largest demands on the world's power grid comes from external power supplies (EPSs); these include laptop adapters and phone and tablet USB chargers/adapters.
