What is EPC power?

At EPC Power, we're focused on delivering scalable, future-ready products that allow data center developers to meet their energy needs while reducing their carbon footprint.

Why should data center developers use EPC power's Bess solutions?

EPC Power's BESS solutions enables data center developers meet these challenges by providing: Peak Load Shaving: BESS can store excess energy during off-peak hours and release it during peak demand periods, reducing the strain on the local grid and lowering energy costs.

Why should you choose EPC power's Bess solutions?

EPC Power's BESS solutions can help smooth these power fluctuations so as to not strain the utility interconnection. Renewable Energy Integration [DK1]: BESS can help smooth the intermittency of renewable energy sources, such as solar and wind, making them more reliable and efficient.

How does battery energy storage connect to DC-DC converter?

Battery energy storage connects to DC-DC converter. DC-DC converter and solar are connected on common DC bus on the PCS. Energy Management System or EMS is responsible to provide seamless integration of DC coupled energy storage and solar. Typical DC-DC converter sizes range from 250kW to 525kW.

What is a 30kW photovoltaic storage integrated machine?

Among them, the 30KW photovoltaic storage integrated machine has a DC voltage of 200~850V, supports MPPT, STS, PCS functions, supports diesel generator access, supports wind power, photovoltaic, and diesel power generation access, and is comparable to Deye Machinery. The Energy Management System (EMS) is the "brain" of the energy storage cabinet.

What is a DC coupled solar PV system?

DC coupled system can monitor ramp rate, solar energy generation and transfer additional energy to battery energy storage. Solar PV array generates low voltage during morning and evening period. If this voltage is below PV inverters threshold voltage, then solar energy generated at these low voltages is lost.
