

How a charging pile energy storage system can improve power supply and demand?

Charging pile energy storage system can improve the relationship between power supply and demand. Applying the characteristics of energy storage technology to the charging piles of electric vehicles and optimizing them in conjunction with the power grid can achieve the effect of peak-shaving and valley-filling, which can effectively cut costs.

What are the parts of a charging pile energy storage system?

The charging pile energy storage system can be divided into four parts: the distribution network device, the charging system, the battery charging station and the real-time monitoring system [ 3 ].

What are electric vehicle charging piles?

Electric vehicle charging piles are different from traditional gas stations and are generally installed in public places. The wide deployment of charging pile energy storage systems is of great significance to the development of smart grids. Through the demand side management, the effect of stabilizing grid fluctuations can be achieved.

How many charging piles are there?

However, as of the end of 2018, there were only 777,000 charging piles available, as shown in Fig. 1, among which only 30,000 were public charging facilities, accounting for 38.96% ( De et al., 2019, Tan et al., 2019 ).

Is private charging pile sharing a viable solution?

The supply of public charging infrastructure is insufficient to meet the charging demand of a large number of electric vehicles (EVs). Private charging pile sharing is an emerging solution to alleviate this imbalance. However, a reasonable price for charging pile sharing has not yet been determined.

How long does a charging pile take?

It is determined by the capacity of the charging point. Due to the limitation of power grid capacity and location, private piles are mostly slow charging, and the charging time is usually more than 6 h. There are two kinds of public charging piles: fast charging and slow charging. The power of a charging pile is high and the charging time is short.
