#### Does pumped storage power maintain grid stability?

Many countries configured a certain proportion of pumped storage power in the network to keep their grid stability. This paper introduces the current development status of the pumped storage power (PSP) station in some different countries based on their own economic demands and network characteristics.

### Why is pumped Energy Storage important?

Besides, it is an effective power storing tooland now it has become the largest and most widely used energy storage form. Many countries configured a certain proportion of pumped storage power in the network to keep their grid stability.

### What is a pumped storage hydropower plant (PSH)?

Pumped storage hydropower plants (PSH) are designed to lift water to a reservoir at higher elevationwhen the electricity demand is low or when prices are low, and turbine water to produce electricity when the demand is high and/or prices are high.
