Principle of frequency and peak regulation of energy storage

What is the multi-timescale regulation capability of a power system?

The multi-timescale regulation capability of the power system (peak and frequency regulation,etc.) is supported by flexible resources,whose capacity requirements depend on renewable energy sources and load power uncertainty characteristics.

Why is frequency regulation important in modern power system?

In modern power system, the frequency regulation (FR) has become one of the most crucial challenges compared to conventional system because the inertia is reduced and both generation and demand are stochastic.

Which energy storage technology provides fr in power system with high penetration?

The fast responsive energy storage technologies, i.e., battery energy storage, supercapacitor storage technology, flywheel energy storage, and superconducting magnetic energy storage are recognized as viable sources to provide FR in power system with high penetration of RES.

What is the power and capacity of Es peaking demand?

Taking the 49.5% RE penetration system as an example, the power and capacity of the ES peaking demand at a 90% confidence level are 1358 MWand 4122 MWh, respectively, while the power and capacity of the ES frequency regulation demand are 478 MW and 47 MWh, respectively.

What is the demand power for frequency regulation of Es?

The demand power for frequency regulation of ES for the four penetration scenarios is 203 MW,290 MW,483 MW,and 702 MW at 90% of the confidence level,which is equivalent to 1.68%,2.22%,3.41%,and 4.53% of the total installed system capacity respectively.

Does es capacity enhance peak shaving and frequency regulation capacity?

However, the demand for ES capacity to enhance the peak shaving and frequency regulation capability of power systems with high penetration of RE has not been clarified at present. In this context, this study provides an approach to analyzing the ES demand capacity for peak shaving and frequency regulation.

This paper firstly presents the technical requirements of energy storage participating in primary frequency regulation in China, and then puts forwards a frequency regulation technology ...
