[60]. Although domestic supply has also increased, China's import dependency on minerals (ratio of imports to the sum of imports and domestic production) remained at a high level during 2015-2021, ranging from 75% (in 2020) to 88% (in 2018).

WASHINGTON, D.C. -- The U.S. Department of Energy (DOE) today issued two notices of intent to provide \$2.91 billion to boost production of the advanced batteries that are critical to rapidly growing clean energy industries of the future, including electric vehicles and energy storage, as directed by the Bipartisan Infrastructure Law.

The next obvious question concerns the origin of current and additional energy supplies up to 2030. Again, an analysis of the EIA figures is revealing. In 2004, "non-carbon" sources of energy (nuclear and renewables) accounted for 14% of total global energy production, the balance being from the basket of fossil fuels (coal, oil and gas).
