

# Refute the rumor that energy storage batteries are in short supply

What is the future of battery storage?

Batteries account for 90% of the increase in storage in the Net Zero Emissions by 2050 (NZE) Scenario, rising 14-fold to 1 200 GW by 2030. This includes both utility-scale and behind-the-meter battery storage. Other storage technologies include pumped hydro, compressed air, flywheels and thermal storage.

Why is battery storage important?

Battery storage has many uses in power systems: it provides short-term energy shifting, delivers ancillary services, alleviates grid congestion and provides a means to expand access to electricity. Governments are boosting policy support for battery storage with more targets, financial subsidies and reforms to improve market access.

How does innovation affect battery storage?

Innovation reduces total capital costs of battery storage by up to 40% in the power sector by 2030 in the Stated Policies Scenario. This renders battery storage paired with solar PV one of the most competitive new sources of electricity, including compared with coal and natural gas.

Are EVs the future of battery storage?

EVs accounted for over 90% of battery use in the energy sector, with annual volumes hitting a record of more than 750 GWh in 2023 - mostly for passenger cars. Battery storage capacity in the power sector is expanding rapidly.

How EV battery storage is boosting policy support?

Governments are boosting policy support for battery storage with more targets, financial subsidies and reforms to improve market access. Global investment in EV batteries has surged eightfold since 2018 and fivefold for battery storage, rising to a total of USD 150 billion in 2023.

Are new battery chemistries a challenge to lithium-ion batteries?

Today lithium-ion batteries are a cornerstone of modern economies having revolutionised electronic devices and electric mobility, and are gaining traction in power systems. Yet, new battery chemistries being developed may pose a challenge to the dominance of lithium-ion batteries in the years ahead.

U.S.-based industries into all aspects of the lithium-battery supply chain for commercial and defense applications, thus enabling the development and commercialization ...
