

Why is China promoting energy storage at the 2025 two sessions?

The buzzword "energy storage" at the 2025 Two Sessions underscores China's strategic focus on building a resilient, sustainable, and diverse energy system, contributing new efforts to a sustainable global future. The country's progress in new-type energy storage highlights how innovation can drive both economic and environmental progress worldwide.

What is new-type energy storage?

This year, "new-type energy storage" has emerged as a buzzword. Unlike traditional energy, new energy sources typically fluctuate with natural conditions. Advanced storage solutions can store excess power during peak generation and release it when needed, enabling greater reliance on renewables as a primary energy source.

What will China's energy storage capacity be by 2025?

[Photo by Tan Yunfeng/For China Daily] China aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by 2025, with an installed capacity of more than 30 million kilowatts, regulators said.

Why did Ren Zeping leave Evergrande?

Global Times Ren Zeping, the former chief economist of Evergrande Group, offered an explanation on his WeChat account on Monday about why he left the company, saying his suggestions about reducing liabilities had not been accepted by the company leader even though Evergrande's debt ratio had reached 86.25 percent.

What is the country's plan for energy storage by 2030?

The country has vowed to realize the full market-oriented development of new energy storage by 2030, as part of efforts to boost renewable power consumption while ensuring stable operation of the electric grid system, a statement released by the National Development and Reform Commission and the National Energy Administration said.

Will China's new energy storage sector grow in 2024?

BEIJING -- China's new energy storage sector saw rapid growth in 2024, with installed capacity surpassing 70 million kilowatts, said an official with the National Energy Administration.
