

Research on energy storage in the field of ecological civilization construction

What is Ecological Civilization Construction (ECC)?

Ecological Civilization Construction (ECC), a Chinese solution toward sustainable development, is tailored to China's unique national conditions (He et al., 2022) and serves as China's commitment to global sustainable development (Ye et al., 2022).

What is Ecological Civilization Construction?

Ecological civilization construction is a gradual advancement process under the "Five in One" overall layout of China's national strategy. Thus, the evaluation of EC construction is essential and should be updated gradually with the process.

How effective is China's Ecological Civilization Construction?

Established an evaluation approach based on target correlation and coupling coordination degrees for EC construction. Effectiveness of China's ecological civilization construction has been improved steadily from 2006 to 2017. Results show that national EC strategies such as "Five in one" overall layout play active role in EC construction.

What is the performance level of Ecological Civilization Construction?

Performance level of ecological civilization construction (7) $T = a U_1 + v U_2 + g U_3$ In the formula, $a, v,$ and g represent the weights of the three subsystems: economic and social development, environmental quality improvement, and resource and energy utilization. 3.4. Coupling coordination model

How to evaluate Ecological Civilization Construction?

The existing research on the evaluation of ecological civilization construction mainly focuses on the static and horizontal comparison of the construction levels at provincial and municipal levels. The main purposes of these indicator systems are to examine and facilitate the local EC construction.

How to achieve the construction target of ecological civilization in 2020?

To achieve the construction target of ecological civilization in 2020 on time, the annual growth rate of target correlation between 2018 and 2020 should reach 14.74%. Fig. 1. The growth rate of target correlation degree of ecological civilization construction system in China from 2007 to 2017. Fig. 2.

Ecological civilization is an important paradigm proposed by China in the context of growing local environmental challenges. The application of ecological civilization may have a spillover effect on the globe. To understand ...

Based on the analysis of the status and trends of Henan's biomass energy (BE) development, this paper summarizes the present status of the construction of ecological civilization (CEC) and the factors restricting its development.

Research on energy storage in the field of ecological civilization construction

From cultural and ideological perspective, the book presents the basic connotation and historical significance of ecological civilization construction advocated by China. It shows a tangible and multi-dimensional process and ...

China has inherited and developed Iring Fetscher's (1978) concept of ecological civilization. Cultural research on the ecological civilization of Chinese society helps choose a road map for late-developing countries.
