What is the energy quantity for a battery reserve?

The energy quantity for the reserve is limited by the battery power capacity, as expressed in (9). The activated quantities in both upward and downward regulations ($\Delta P_{fcr,+}$, $\Delta P_{fcr,-}$) are defined in the Eqs. (10), (11), where $\Delta P_{fcr,\pm} = 1$, if frequency measures are below 50 Hz hence upward regulation is needed.

How does energy storage work?

The so-called battery "charges" when power is used to pump water from a lower reservoir to a higher reservoir. The energy storage system "discharges" power when water, pulled by gravity, is released back to the lower-elevation reservoir and passes through a turbine along the way.
