

When can you use energy stored in a home battery?

Home batteries store energy... so you can use it later when energy prices are higher or during power outages. They typically use Lithium-ion batteries, which are more efficient and durable than other battery technologies.

Is the Storage Power System a good battery choice?

All around, the Storage Power System is a solid battery choice. It's very scalable, up to 180 kWh, and has high peak and continuous power, allowing you to power multiple devices at once. It can also be directly integrated with Savant's product suite for luxury smart home living.

How much energy can a battery store?

For most battery systems, there's a limit to how much energy you can store. To store more, you need additional batteries. Even if you don't pull electricity from your battery, it will slowly lose its charge over time.

What's the best way to use home batteries?

You'll get the most out of your home batteries when you pair them with a home solar panel system. This is especially true if your utility doesn't pay you a lot for the excess electricity your solar panels generate and send to the grid. You don't need a home solar panel system to reap the benefits of batteries.

How many kWh does a battery backup system store?

Whole-home battery backup systems typically store around 10 to 15 kWh of energy. While partial-home systems usually store less, they may be sufficient for areas with infrequent power outages. However, if your utility's power supply is unreliable, a whole-home battery backup system might be the better choice.

What do whole-home battery backup systems power?

Whole-home battery backup systems can power your entire home in the event of an outage. The difference between whole-home and partial-home battery backup systems is pretty self-explanatory: Whole-home systems just have more batteries.
