

What is thermal energy storage used for air conditioning systems?

This review presents the previous works on thermal energy storage used for air conditioning systems and the application of phase change materials (PCMs) in different parts of the air conditioning networks, air distribution network, chilled water network, microencapsulated slurries, thermal power and heat rejection of the absorption cooling.

Why is energy storage important in solar air conditioning?

Energy storage technology plays a very important role in the solar air conditioning field. Building load accounts for 30-50% of the total electricity load, whereas air conditioner cooling is a large part of the energy consumption within a building, accounting for 85% of the total at the peak in summer.

Can compressed air energy storage systems be used for air conditioning?

This work presents findings on utilizing the expansion stage of compressed air energy storage systems for air conditioning purposes. The proposed setup is an ancillary installation to an existing compressed air energy storage setup and is used to produce chilled water at temperatures as low as 5 °C.
