What is a small scale energy system?

Small scale energy systems can be categorized as ones that are able to supply energy in various forms for a building, or a small area, or a limited community, or an enterprise; typically, they are end-user systems. Energy storage technologies are classified based on their form of energy stored.

What is a chemical energy storage system?

Chemical energy storage systems (CESSs) Chemical energy is put in storage in the chemical connections between atoms and molecules. This energy is released during chemical reactions and the old chemical bonds break and new ones are developed. And therefore the material's composition is changed . Some CESS types are discussed below. 2.5.1.
