

Solid energy storage furnace investment analysis

Is there a realistic investment decision framework for energy storage technology?

Therefore, in order to provide a more realistic investment decisions framework for energy storage technology, this study develops a sequential investment decision model based on real options theory, which can consider policy, technological innovation, and market uncertainties.

What is solid heat storage technology?

Compared with the former, the principle of solid heat storage technology is simple, and it has been widely used in various fields such as solar energy, industrial waste heat energy, wind power heating, deep peak regulation of thermoelectric units, building energy saving and textile industry.

What is the investment benefit coefficient of energy storage technology?

Therefore, this study uses the unit annual peaking capacity of the energy storage system for the solution, that is, the investment benefit coefficient of the first energy storage technology is 140 (14,000 MWh/100 MWh).

Is there a real option model for energy storage sequential investment decision?

Propose a real options model for energy storage sequential investment decision. Policy adjustment frequency and subsidy adjustment magnitude are considered. Technological innovation level can offset adverse effects of policy uncertainty. Current investment in energy storage technology without high economics in China.

How to choose the best energy storage investment scheme?

By solving for the investment threshold and investment opportunity value under various uncertainties and different strategies, the optimal investment scheme can be obtained. Finally, to verify the validity of the model, it is applied to investment decisions for energy storage participation in China's peaking auxiliary service market.
