

Is energy storage a precondition for large-scale integration and consumption?

So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry.

How to improve energy storage technology?

First of all, quicken the pace of establishing basic standards and revising the existing standards. Technology standards, design specifications and other requirements are of the basic standards of energy storage technologies. At present, some relevant standards for corporations and industry have been established and published.

What is the 'guidance on accelerating the development of new energy storage'?

Since April 21, 2021, the National Development and Reform Commission and the National Energy Administration have issued the 'Guidance on Accelerating the Development of New Energy Storage (Draft for Solicitation of Comments)' (referred to as the 'Guidance'), which has given rise to the energy storage industry and even the energy industry.

Does energy storage industry need a policy guidance?

Sungrow Power Supply Co., Ltd.: energy storage industry needs the policy guidance urgently. Machinery & Electronics Business; 2015-6-22: A06. Policy and innovation are key factors for the development of energy storage technology. China Electric Power News; 2016-4-28: 008. Lin Boqiang.

Why is energy storage important?

Driven by the national strategic goals of carbon peaking and carbon neutrality, energy storage, as an important technology and basic equipment supporting the new power systems, has become an inevitable trend for its large-scale development.

Do we need energy storage solutions?

"We need energy storage solutions to make them permanent," says researcher and electric battery expert Philippe Knauth in an interview for bbva.com. He also points out that the democratization of energy depends on "the combination of renewable energies and energy storage."
