

Can energy storage equipment operate in parallel with the grid?

In Section 3.1.1 of the Xcel Energy Guidelines for Interconnection of Electric Energy Storage with the Electric Power Distribution System document (Energy Storage Guidelines document), Configuration 1A, the energy storage equipment is not capable of operating in parallel with the grid.

How does energy storage work?

Energy storage operates in parallel with the grid. Generation, if present, is non-renewable. Metering is standard (non-net-metered). Energy storage and generation, if present, are not allowed to export energy to the grid. The method of achieving #4 must be fully illustrated in the online diagram or described below.

Which ESS switch should I use?

The most suitable switch to use depends on the size of the ESS, and whether the topology is behind or in front of the meter. Utility scale ESS (>1 MW) have "front of the meter" topology. ESS Commercial and industrial (0.1-1 MW) and residential (<100 kW) ESS have "behind the meter" topologies.

Can an energy storage device be interconnected without an interconnection review?

The declaration allows interconnection of the energy storage device without an interconnection review if this mode is secure from change. In Energy Storage Guidelines document Section 3.2.1, Configuration 2A, the energy storage equipment is not capable of operating in parallel with the grid.

What is parallel operation of energy storage?

"Parallel Operation of Energy Storage" - a source operated in parallel with the grid when it is connected to the distribution grid and can supply energy to the Interconnection Customer simultaneously with the Company's supply of energy.

What is the mechanical endurance of OTDC switch-disconnectors?

The mechanical endurance of OTDC switch-disconnectors from 100A up to 1000A is 10 000 mechanical operation cycles, which is up to 90% higher than other existing products in the market. OTDC switch-disconnectors from 100 to 800 A fulfill the highest requirements in the IEC standards, such as DC-PV2 utilization category.
