What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

Who uses battery storage?

Battery storage is a technology that enables power system operators and utilities to store energy for later use.

How do batteries store electricity?

Batteries can take that excess electricity and store it until such time as it can be put to work. But there are other ways of storing electricity that rely on potential energy. An example of potential energy is a freight train parked at the top of a mountain.
