

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

What does a battery store?

"A battery is a device that is able to store electrical energy in the form of chemical energy, and convert that energy into electricity," says Antoine Allanore, a postdoctoral associate at MIT's Department of Materials Science and Engineering.

How do batteries store electricity?

Batteries and similar devices accept, store, and release electricity on demand. They use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.

Who uses battery storage?
